Roseda Farm's MATERNAL POWER

RARE.

THESE GIRLS ARE STACKED! With carcass genetics

As we established the maternal base at Roseda Farm, our goal was to develop a registered Angus herd **genetically oriented to meet the demands of the East Coast consumer for high quality beef with a cow that can economically produce it in the highly variable Maryland environment under a forage based management system.** Our first step was to identify the sires that were most likely to accomplish our goal and then to identify herds with similar production goals that had the influence of these sires.

As a result, the Roseda foundation females were selected primarily from three herds, Gardiner Angus Ranch, Spring Cove Ranch and Wye Angus. We selected females from productive cow families with emphasis on carcass EPDs. Most were stacked 2 to 3 generations deep with foundation carcass sires such as Sleep Easy, Scotch Cap, Independence, 5204, Ambush and Direct Drive.

In the case of the Wye females, we were able to purchase some outstanding females when Wye dispersed their carcass research herd in 1997. This effectively allowed us to continue the carcass breeding/research program Dean managed while working for the University of Maryland.

We then bred and flushed these foundation cows to 036, 323, Expo, 365, 216LTD and 6148 to produce the next generation of Roseda females such as those featured in this ad. More recently, we have added a few select females from Rishel Angus and Summitcrest Farms.

As you study our top twenty-five females, we hope you gain an appreciation for the depth of the pedigrees, the strength of the EPDs and the commitment of the Roseda Breeding program to improve carcass quality and composition in Angus cattle. We truly believe that Roseda Farm is the most concentrated source of superior carcass genetics in the world. Where else can you find 25 Angus females that average .5 for marbling and .6 for retail product?

Several of these females are donors in our embryo transfer program. **If you are interested in contracting high carcass embryos for your herd, give us a call.**

Ed and Dean
